Address Per- and Polyfluoroalkyl Substances in the Environment

To the EPA,

Global warming is affecting our rivers, our Great Lakes and the earth's oceans. We our long overdue to state that PFSAS are hazardous chemicals. We need to eliminate them right now and hold individuals and companies accountable for their use and dispersion. The earth and its water's health is directly responsible for human health. The knowledge of toxic pollutants must be addressed. CERCLA is the law that can help bring attention and remediation to them.

As a GREENING EDUCATION Partner of UNESCO, Our non profit NEXT.cc, STEA by DESIG ELearning works to making everyone climate change literate . Life on earth needs clean air, water, and energy.

If we know something is bad we mut stop its use. I suppport the EPA in addressing this offense to our health.

Sincerely,
Linda Nelson Keane, FAIA
